

# AT PDPI WORKPLACE SAFETY MATTERS

**PDPI has added important new safety guards to its line of Mat Rollers that exceed OSHA Standards and improve workplace safety.**

Standard safety upgrades on the High Roller II-S and the EZ Roller Mat Rollers include:

- Safety guards at the front and sides of the mat roller that virtually eliminate any possible pinch points where the operator interacts with the machine during operation
- Openings in the machine work area are smaller than OSHA's requirement of ¼ inch<sup>1</sup>

**An optional photoelectric light curtain safeguard is available on both machines in addition to the existing manual emergency stop buttons.**

**This safeguard device automatically stops the machine if the operator's hands penetrate the light curtain in front of the mat rolling area.**

These new safeguards help prevent injury to operators' fingers and hands, improving the safety of your workplace and ensuring OSHA compliance.

1. OSHA Standard 29 CFR 1910.217(c)
